

## ECLIPSE HIGH RESOLUTION RETINA

Jan 22, 2021

[Eclipse High Resolution Retina](#)

Make Eclipse Support Retina Resolution Posted by Kyle Diedrick. Anyone doing Android development on a Retina Macbook Pro is probably going crazy dealing with Eclipse. Even in the latest version of the ADT, Eclipse does not support the Retina display. Fortunately, there's an easy way to fix Eclipse so that it works with the new Retina displays. First, open finder and navigate to the directory ...

Solar retinopathy (also known as, photic retinopathy, foveomacular retinitis, solar retinitis, and eclipse retinopathy) refers to a photochemical toxicity and resultant injury to retinal tissues, usually occurring at the fovea. This entity is commonly associated with sun-gazing or eclipse viewing, and often results in mild-to-moderate visual acuity deficit and/or central or paracentral scotomata.

When using external monitor with smaller resolution (1920x1080) the windows are usable. When I switch to MBP Retina Display things get messy. The tabs of applications are tiny, the windows (close, minimize) bigger and text inside browsers or windows huge. Making resolution lower does not help as text becomes blurry.

[Eclipse on a high DPI display \(in Windows\) – javahacker.com](#)

Try to run Eclipse with the Package explorer open and a source file with the MacBook Pro 13". It is not fun. IDE's are not meant to run on low resolution displays. If you are used to vi and tabbing around I imagine a low resolution display will work just fine. The next important thing is to make sure all the text is very clear. Nothing worse than a high resolution on a small screen where you ...

SWT provides resolution-based auto-scaling SWT now automatically scales images on high-DPI monitors on Windows and Linux, similar to the Mac's Retina support on OS X. In the absence of high-resolution images, SWT will auto-scale the available images to ensure that SWT-based applications like Eclipse are scaled proportionately to the resolution of the monitor.

[Retina Display support - Genuitec](#)

At the same time I noticed that students start using these 'high-resolution-retina-displays'. They are great, but result in tiny default system fonts, so I have a hard time to read the source code on their machines. Another challenge I noticed are the high-resolution projectors in class rooms or conferences. They are not well suited to show source code or text files because of the tiny ...

Support for high-DPI displays in Eclipse has been in the works for about four years. For those of us on a "retina" MacBook, the lack of it has not been much of a problem since fonts could be fixed with a simple setting and images are automatically scaled. Images appeared blurred, but that was it. However on Windows and Linux icons have been tiny, making Eclipse practically useless in some ...

I just tested this on my MacBook Pro with retina, so the answer is yes and no - at least under Mountain Lion. If you use Java directly from the command line, the answer is yes: it will launch in HiDPI and render text in high resolution. Things rendered using Graphics2D will render in high resolution mode. (So if you render a line 0.5 AWT pixels ...

Much like how iPhone UI elements handles it's retina screen, the HiDPI modes in Mac OS X double the resolution of many onscreen elements, which would make the elements look sharper on very high resolution displays. Unfortunately, these aren't particularly useful at the moment because no Mac screen currently supports a 'retina' resolution, and for now, using HiDPI basically just loads ...

In the past couple of years the monitor pixel resolution has increased dramatically. Some years ago we were all happy with HD resolution or even Full HD resolution. Then "Retina" displays were promoted and now we reached a new all time height with 4 K monitors. Monitors with 4000 pixel in width. So how do we write SWT code that runs on 800 x 600 AND also on 3840 x 2160 ?
