Although essentially all types of EE's use ac circuit analysis to some degree, the overwhelming majority of applications are in the high energy ("power") field. It happens that if power levels are above about 10 kW, it is more practical and efficient to arrange ac circuits in a "polyphase" configuration. Although any number of

Linear Circuits Analysis. Superposition, Thevenin /Norton Equivalent circuits So far we have explored time-independent (resistive) elements that are also linear. A time-independent element is one for which we can plot an i/v curve. The current is only a function of the voltage, it does not depend on the rate of change of the voltage. We will see later that capacitors and inductors are not ...
