The first section of Plant Cell Electroporation and Electrofusion Protocols includes two chapters that serve as a guide to theoretical and practical aspects of electroporation, and will be of particular interest to those developing protocols for as yet untested species or cell types, and a third chapter that describes commercially available electroporation instruments. The remaining chapters describe well-tested protocols for DNA electrotransfection, electroporation of other biomolecules, or ...

Leading experts and innovators describe in detail plant cell electroporation and electrofusion techniques for many types of plants. Their protocols cover a diverse set of plant cell types, including different cell types from a single organism (i.e., leaf cells and pollen) and the most important model plants, including maize and tobacco.
